An orally disintegrating tablet or orally dissolving tablet (ODT) is a drug dosage form available for a limited range of over-the-counter (OTC) and prescription medications. ODTs differ from traditional tablets in that they are designed to be dissolved on the tongue rather than swallowed whole. The ODT serves as an alternative dosage form for patients who experience dysphagia (difficulty in swallowing) or for where compliance is a known issue and therefore an easier dosage form to take ensures that medication is taken.

Global Orally Disintegrating Tablet main manufacturers include Teva, Merck, Mylan, Pfizer, Johnson and Johnson, GSK, Otsuka, Eli Lilly and Company, AstraZeneca, Bristol-Myers Squibb and Conquer, totally accounting for about 17% of the market. North America is the largest market of glass packaging, holding a share more than 40%. As for the types of products, it can be divided into anti-psychotics drug, anti-epileptics drug and others. As for the applications of products, it is widely used in CNS diseases, gastrointestinal diseases, CVS diseases and others.
