Orally disintegrating tablet (ODT) technology involves the formulation of tablets that rapidly disintegrate and dissolve in the mouth without the need for water. This innovative pharmaceutical dosage form is designed to enhance patient convenience and compliance, particularly for individuals who have difficulty swallowing traditional tablets or capsules. ODTs typically utilize superdisintegrants, such as crospovidone or sodium starch glycolate, along with other excipients and processing techniques to promote rapid disintegration upon contact with saliva. The resulting tablet formulation provides a pleasant mouthfeel, quick dissolution, and improved bioavailability of the active pharmaceutical ingredient, making it suitable for various patient populations, including pediatric, geriatric, and psychiatric patients. Additionally, ODT technology offers advantages in terms of dosing accuracy, ease of administration, and potentially faster onset of action compared to conventional oral dosage forms.

The global Orally Disintegrating Tablet Technology market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
