The Orally Disintegrating Tablets (ODT) platform is an advanced pharmaceutical dosage form designed to dissolve or disintegrate rapidly in the mouth without the need for water, offering enhanced patient convenience and compliance. ODTs typically utilize superdisintegrants and other excipients to promote rapid disintegration upon contact with saliva, facilitating quick absorption of the active pharmaceutical ingredient through the oral mucosa. This platform enables the development of fast-dissolving tablets that provide a pleasant mouthfeel, ease of administration, and potentially faster onset of action compared to conventional oral dosage forms. ODT technology is particularly beneficial for patients who have difficulty swallowing tablets or capsules, including pediatric, geriatric, and psychiatric populations, and offers advantages in terms of dosing accuracy, patient adherence, and improved bioavailability of the drug.

The global Orally Disintegrating Tablets (ODT) Platform market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
