The orbital action jigsaw is an upgraded electric jigsaw. Different from the traditional up-and-down reciprocating saw blade method, it adopts the 'orbital motion' mechanism, that is, while the saw blade is cutting up and down, it adds an elliptical trajectory motion that tilts forward and backward, thereby achieving a more efficient material removal rate and a faster straight-line cutting speed. Orbital action jigsaws are usually equipped with adjustable track swing gears. Users can choose different track amplitudes according to the hardness of the material and the requirements of cutting accuracy. It is suitable for rough processing and fast cutting of wood, plastics and some metals. This tool is widely used in the woodworking, construction, installation and maintenance industries, and is particularly suitable for large-scale and long-term use scenarios. Compared with non-orbital jigsaws, it has obvious advantages in efficiency, but is slightly inferior in fine curve cutting.
