Orbital maneuvering vehicles are a special type of spacecraft. They usually carry less propellant and have a relatively small range of activity, usually within a few kilometers to a few megameters around the central space station. They are mainly used to travel between satellites or platforms in the same orbital plane as the space station to perform tasks such as replacing and repairing instruments and equipment on the space station, replenishing consumables, retrieving data and space-processed products. This type of orbiter usually consists of a remote-controlled propulsion cabin, a special functional cabin and some components, and can temporarily add a manned or cargo cabin according to mission requirements.

United States market for Orbital Maneuvering Vehicle is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Orbital Maneuvering Vehicle is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
