The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

An organic acid is an organic compound with acidic properties. The most common organic acids are the carboxylic acids, whose acidity is associated with their carboxyl group –COOH. Sulfonic acids, containing the group –SO2OH, are relatively stronger acids. Alcohols, with –OH, can act as acids but they are usually very weak. The relative stability of the conjugate base of the acid determines its acidity. Other groups can [also] confer acidity, usually weakly: the thiol group –SH, the enol group, and the phenol group. In biological systems, organic compounds containing these groups are generally referred to as organic acids.

Global key players of organic acid include Celanese, BP, Jiangsu Sopo, Huayi, Eastman, etc. Global top five manufacturers hold a share over 32%. The key players are mainly located in North America, China, South Korea, Middle East, Europe and Japan. In terms of product, acetic acid is the largest segment, with a share over 70%. And in terms of application, the largest application is industrial, with a share over 60%.
