Organic anchoring agent is an anchoring material made of solvent-free organic matter as a matrix and refined by combining adhesives and fillers and other additives. It is mainly used for anchoring components such as steel bars and bolts in important projects such as buildings, bridges, and tunnels. Organic anchoring agents use solvent-free organic matter as the main matrix, which makes it environmentally friendly without producing harmful gases during construction. In addition to the matrix, organic anchoring agents also contain additives such as adhesives and fillers. The addition of these ingredients enhances its bonding strength and construction performance. Organic anchoring agents are widely used in anchoring work on substrates such as concrete, steel structures, and rocks, and are especially suitable for anchoring projects that need to withstand large torques, large shear forces, and large tensile forces. They usually have the characteristics of high bonding strength and convenient construction, and can achieve high strength in a short time to ensure the reliability of the anchoring effect.

The global Organic Anchoring Agent market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
