Aqua Feed is special collocation food for aquatic animals considering essential nutrients and ingredients.

Aquafeed pellet is made of amount of ingredients in various proportion that are pelleted or extruded to the compound diet, which have good shapes, full gelatinization and high level of protein.

The nutrient components in fish feed mainly consists of protein, starch (sinking aquafeed consists more than 10% and floating aquafeed consists more than 20%), crude fat, raw fiber, crude ash, vitamin and minerals. Protein provides energy and builds muscles. Vitamins and minerals can enhance natural resistance and feed conversion rate. Starch has great gelatinization under high temperature and high humidity conditions. It can improve the stability of aquafeeds and extrusion density of extruded aquafeeds.
