Organobentonite rheology agent refers to a rheology control agent whose main component is organobentonite (that is, the organically modified product of montmorillonite or other clay minerals). Organic bentonite rheological agents are widely used in cement-based materials, paints, coatings, cosmetics, paper, ceramics and other industries. Organic bentonite rheological agent can effectively adjust the rheological properties of the material through its special dispersion, adsorption and thickening effects, so that the material has better adhesion, fluidity, consistency and stability. In addition, the organic bentonite rheology agent also has certain enhancement properties, which can enhance the crack resistance and wear resistance of materials. The main advantages of organobentonite rheological agents include high efficiency, ease of use, environmental protection, high temperature resistance, and good stability.
