## Abstracts

The global Organic Electrolyte Solution market size is predicted to grow from US\$ 5310 million in 2025 to US\$ 10212 million in 2032; it is expected to grow at a CAGR of 10.0% from 2026 to 2032.

Organic electrolyte solution is an electrochemical functional material in which electrolyte salts (such as lithium, sodium, or quaternary ammonium salts) are dissolved in organic solvents to form an ion-conducting medium. It is widely used in lithium-ion batteries, sodium-ion batteries, and capacitors. Its core function is to provide high ionic conductivity, a wide electrochemical stability window, and good interfacial compatibility between cathode and anode.

A typical formulation consists of organic carbonate or ether solvents (such as EC, DMC, DEC), electrolyte salts (such as LiPF<sub>6</sub>, LiBF<sub>4</sub>), and functional additives (film-forming agents, flame retardants, overcharge protection agents). Key technologies include high-purity control, moisture control at ppm level, formulation stability design, and safety enhancement.

Upstream industries include high-purity solvents, electrolyte salts, additive suppliers, and fine chemical manufacturers. Downstream applications mainly cover power batteries, energy storage batteries, consumer electronics batteries, and certain electrochemical devices. The overall industry gross margin generally ranges from 20% to 35%, with higher margins for advanced power battery electrolytes, though profitability is sensitive to lithium salt price fluctuations.

Global organic electrolyte solution production is projected to reach 1.872 million tons in 2025, with an average price of \$2,900 per ton.

United States market for Organic Electrolyte Solution is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
