High selenium yeast is a form of supplemental selenium, which is also referred to as organic selenium. Selenium yeast is produced using the microorganism *Saccharomyces cerevisiae*, which is better known as baker's yeast or brewer's yeast. When the yeast is grown in a selenium-enriched medium, it absorbs the selenium and converts it into the form of selenium naturally found in foods, selenomethionine.

Chemical is an important driver of this industry. Emerging economies, particularly in Asia and Latin America, are experiencing rapid industrialization, urbanization, and population growth. This drives the demand for bulk chemicals across various sectors, including construction, automotive, electronics, agriculture, and consumer goods. The rising middle class in these regions is also contributing to increased consumption of chemical products.
