Organic paraffin wax is a refined hydrocarbon wax derived from organically sourced feedstocks, processed under environmentally friendly conditions and compliant with organic certification standards such as USDA Organic or ECOCERT. It appears as a white or translucent solid, typically composed of saturated hydrocarbons with carbon chains ranging from C20 to C40. With a melting point between 46°C and 68°C and oil content below 0.5%, it is odorless, non-toxic, and suitable for use in clean-label cosmetics, food-safe coatings, therapeutic candles, and personal care products. Its organic nature makes it particularly appealing for eco-conscious consumers and applications demanding high purity and sustainability.

Organic paraffin wax typically exhibits a melting point range of 46°C to 68°C, with an oil content of  $\approx$ 0.5% for fully refined grades and up to 1.5% for semi-refined types. It is generally white or translucent, odorless, and available in forms such as slabs, pellets, or flakes. Key physical characteristics include a penetration value of 10–25 dmm at 25°C, viscosity of 10–20 cSt at 100°C, and a drop melting point around 52–60°C. The flash point is usually  $\approx$ 200°C, ensuring safety in heated applications like spa treatments. It also maintains high purity, with ash content  $\approx$ 0.03% and sulfur content  $\approx$ 0.01%, making it suitable for cosmetics, therapeutic products, food contact materials, and eco-conscious candles. Organic variants often carry certifications such as USDA Organic, COSMOS, or ECOCERT, confirming compliance with sustainable sourcing and

processing standards.
