Organic preservatives include benzoic acid and acid salts, sorbic acid and acid salts, esters of p-hydroxybenzoic acid, and the like. Sorbic acid, benzoic acid, and salts are basically based on undissociated molecules to fully exert their bactericidal effect. Both must be converted into the corresponding acid to work, so it is called acid preservative. Under the acid standard, it has a certain inhibitory effect on mold, yeast and bacteria. In addition, propionic acid and salts are particularly effective in inhibiting filamentous mucus-producing bacteria and have a high safety factor.
