Organoid culture medium is a specialized nutrient solution used for the in vitro cultivation of organoids, which are three-dimensional cell structures that mimic the architecture and functionality of organs. This medium provides the essential nutrients, growth factors, and signaling molecules required to support the survival, proliferation, and differentiation of cells within the organoid. It plays a crucial role in maintaining the viability and functionality of organoids derived from various tissues, allowing researchers to study organ development, disease modeling, and drug screening in a more physiologically relevant and controlled environment. The composition of organoid culture medium is tailored to specific cell types and tissue origins, optimizing the conditions for the growth and maintenance of these complex cellular structures.

The global Organoid Culture Medium market size is projected to grow from US\$ 142 million in 2024 to US\$ 321 million in 2030; it is expected to grow at a CAGR of 14.6% from 2024 to 2030.
