Ornithine transcarbamylase (OTC) deficiency is a genetic disorder arising due to inadequate levels of OTC, an enzyme that helps decompose and eliminate unwanted nitrogen from the human body. This process is also known as the urea cycle. Deficiency of this enzyme causes excessive nitrogen accumulation, or hyperammonemia, in the blood. Another perilous effect of this genetic disorder is the secretion of elevated levels of ammonia, which is a notorious neurotoxin. Once it reaches the central nervous system, it induces symptoms such as anorexia and overall lethargy.
