ORP (Oxidation-Reduction Potential) balls are specially engineered ceramic balls used in water treatment systems to alter the oxidation-reduction potential of water. These balls typically contain minerals and metals such as tourmaline, magnesium, and sometimes silver or platinum, which interact with water to release negative ions and electrons. This process reduces the ORP value of the water, making it more antioxidative. Lower ORP water is often considered beneficial for health, as it can help neutralize free radicals in the body. ORP balls are commonly used in alkaline water systems, shower filters, and health-focused water products.
