Orthodontic base polymers refer to polymer materials used as the foundational or interface layer at the base of orthodontic brackets, attachments, or appliances. These materials provide structural support, enhance bonding to the tooth surface, and improve stress distribution. Base polymers are often integrated into ceramic or clear brackets and aligner attachments to optimize fit and adhesion. Common materials include epoxy resins, polymethyl methacrylate (PMMA), and polyether ether ketone (PEEK), chosen for their biocompatibility, mechanical strength, and customized detachment behavior.
