During orthopedic surgery, doctors need to directly contact the patient's body tissues and bones. Orthopedic gloves can effectively protect the doctor's hands from contamination by the patient's blood, body fluids, tissue fragments, etc., and can also prevent the doctor from spreading his own bacteria and viruses to the patient, reducing the risk of infection. Orthopedic gloves are usually made of high-quality materials with good elasticity and fit, allowing doctors to better feel the operating force and direction of surgical instruments during surgery, improving the accuracy and safety of the surgery. Orthopedic surgery usually takes a long time, so orthopedic gloves need to have high durability, be able to maintain good performance during long-term surgery, and not be easily damaged or worn.
