Abstracts

The global Oseltamivir Intermediate market size is predicted to grow from US$ 1120 million in 2025 to US$ 1618 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Oseltamivir intermediates refer to the key chemical raw material intermediates used in the synthesis of the antiviral drug oseltamivir. These typically include (3R,4R,5S)-4-acetamido-5-carbamoyl-3-(1-ethyleneoxy)-cyclohexenoic acid ethyl ester and (3R,4R,5S)-4-acetamido-5-carbamoyl-3-(1-hydroxyethyl)-cyclohexenoic acid ethyl ester. Production involves two routes: chemical synthesis and biocatalysis. The former is a mature process with lower costs, while the latter is environmentally friendly and produces higher purity. In 2024, global sales of oseltamivir intermediates were approximately 260 tons, with an average price of approximately US$420 per kilogram and a single-line production capacity of approximately 40 tons. Upstream companies are mainly pharmaceutical intermediate and fine chemical enterprises, providing raw materials such as amino acid derivatives, ester compounds, and catalysts. Downstream companies are mainly pharmaceutical raw material manufacturers and formulation companies, such as Roche, Kelun, and CSPC Pharmaceutical Group. The product gross profit margin is approximately 35%. In the product cost structure, raw materials account for approximately 55%, labor and energy for 20%, and equipment depreciation and management costs for approximately 25%. Classified by parameters, products can be categorized into industrial and pharmaceutical grades, chemically synthesized and biocatalytic types, and those with a purity ?95% and ?99%. On the demand side, downstream demand mainly comes from manufacturers of anti-influenza drug formulations, generic drug companies, and research institutions. Downstream customers include Roche, Pfizer, Chia Tai Tianqing Pharmaceutical Group, and Qilu Pharmaceutical. Regarding business opportunities, policy drivers include increased

stockpiling of influenza prevention and treatment drugs by various countries; technological innovation is driving biocatalytic processes to replace traditional routes to improve yield and environmental performance; and changing consumer demands are reflected in the increasing long-term public demand for antiviral drugs and a growing market preference for high-purity raw materials.
