Outboard engines are marine propulsion systems mounted on the outside of a boat, featuring an engine, gearbox, and propeller, and are easily portable. They are commonly used for smaller vessels. Inboard engines, on the other hand, are situated within the hull of the boat and consist of an engine and transmission system. Inboards are typically employed in larger watercraft and provide advantages such as improved weight distribution and reduced maintenance exposure to corrosive marine elements. Both outboard and inboard engines serve the purpose of powering boats, each with its set of advantages and applications depending on the size and type of the vessel.

The global Outboard and Inboard Engines market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
