An outdoor 3D laser scanner is a sophisticated measuring device used to capture accurate and detailed 3D scans of outdoor environments. It uses laser technology to rapidly and precisely capture data points, creating a point cloud representation of the scanned area. These scanners are specifically designed to withstand outdoor conditions and are commonly used in industries such as construction, architecture, surveying, civil engineering, and cultural heritage preservation.

The scanner emits laser beams that bounce off objects in the environment and return to the scanner's sensor, allowing it to measure distances and create a highly accurate 3D model of the surroundings. The process is known as LiDAR (Light Detection and Ranging).
