Abstracts

The global Outdoor Charcoal Barbeque Grill market size is predicted to grow from US\$ 455 million in 2025 to US\$ 626 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

In 2025, global sales volume of outdoor charcoal BBQ grills is estimated at approximately 3,100,000 units, with an average selling price of around USD 150 per unit. An outdoor charcoal BBQ grill is a traditional cooking device powered by charcoal, generating high heat and smoky flavor through combustion, and is widely used for grilling meat, seafood, and vegetables in backyard gatherings, outdoor camping, and recreational activities. These products offer strong flavor performance, high maximum temperatures, and enhanced cooking experience, but require more effort in ignition and temperature control compared to gas grills. The structure typically includes charcoal trays, cooking grates, ventilation control systems, and outer housing structures, with variations in size, charcoal capacity, and airflow control.

From a market structure perspective, outdoor charcoal BBQ grills represent a traditional core segment within the broader grill market, with demand closely linked to barbecue culture and outdoor recreational activities. Within the overall grill ecosystem, charcoal grills coexist with gas grills, with the former emphasizing flavor experience and the latter focusing on convenience. Industry barriers are low, with competition centered on product design, cost control, and distribution capabilities. The market is highly fragmented overall, although branding trends are gradually strengthening in the mid-to-high-end segment.
