The outdoor dry-type combined transformer is an outdoor high-voltage measuring device that integrates the current transformer (CT) and the voltage transformer (PT) in the same structure. It adopts epoxy resin or silicone rubber dry insulation and has excellent insulation performance, weather resistance and compact structure. This type of transformer is widely used in 10-35kV power systems for metering, protection and monitoring, and can simultaneously realize the comprehensive collection of parameters such as current, voltage, power and electric energy. Compared with traditional oil-immersed transformers, dry-type combined transformers are more environmentally friendly, maintenance-free, and highly adaptable. They are suitable for long-term exposure to complex outdoor environments. They are one of the representative products of highly integrated and intelligent development in modern power distribution systems.
