The outdoor naked eye 3D display is a large display screen that uses LED technology, combined with digital image processing technology and naked-eye 3D imaging technology, to display images and videos with a sense of three-dimensionality in an outdoor environment. These screens use high-brightness LEDs to ensure visibility in daylight and various weather conditions. It uses the visual persistence effect of the human eye on images, and controls the on and off of LED lamp beads to display different two-dimensional images in sequence at a very fast speed, thereby forming a three-dimensional image in front of the human eye.

They are typically employed for advertising, public information displays, entertainment, and event broadcasts, offering a dynamic and engaging viewing experience. The 3D effect is achieved through advanced software and hardware that create the illusion of depth, making images appear to pop out of the screen. Outdoor naked eye 3D display are built to withstand harsh outdoor conditions, featuring robust construction, weatherproofing, and high durability to ensure long-term performance and reliability in public spaces.

The global Outdoor Naked Eye 3D Display market size is projected to grow from US$ million in 2024 to US$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
