The outside rail cable hoist is a heavy-duty lifting equipment installed on the outside of the vehicle chassis and uses a steel cable traction system to load and unload cargo containers. It is widely used in roll-on/roll-off garbage trucks, waste transport trucks, and construction removal vehicles. Its 'outer rail' structure refers to the two load-bearing rails located on both sides of the frame, which is beneficial to the structural strength and load stability of the hoist. It is particularly suitable for lifting and releasing large-sized or high-center-of-gravity containers. This type of cable hoist usually has hydraulic drive, automatic locking, ramp slides and multi-point positioning functions, and is suitable for vehicle platforms with different tonnages of 8 to 30 tons. Compared with the inner rail structure, the outside rail type performs better in large-scale transportation and high-frequency removal scenarios, is easy to maintain and has high cross-brand compatibility. It is widely adopted by North American municipal removal systems and industrial waste processors.
