Outside rail hoist is a heavy-duty lifting equipment used in roll-off truck systems. It is characterized by the lifting rails installed on both sides of the frame (outside the vehicle body). Compared with the inner rail structure, it has greater stability and structural strength, and is suitable for lifting large garbage bins, construction waste bins and industrial containers with a capacity of more than 20 cubic meters. The outside rail design allows the cable, cylinder or pulley system to work on a wider fulcrum, thereby improving the overall load-bearing capacity and lateral force resistance performance, which is especially suitable for high-frequency and heavy-duty operating environments. This type of hoist is widely used in urban waste disposal, construction sites and waste transportation industries. It is often used in conjunction with roll-off trucks and has the advantages of fast loading and unloading and convenient maintenance. In the North American market, outside rail hoists have become one of the preferred configurations for medium and large waste disposal companies due to their durability and compatibility.
