The over current protection chip is used to detect current indicators and prevent damage caused by overcurrent, short circuit, and overheating. It is mainly used in the distribution and management of power paths in lithium battery power supply systems. The overcurrent protection function prevents IC and load damage by suppressing power consumption when an error occurs. If the output current exceeds the limit current (ILIM) due to a wrong load or a short circuit, the output voltage and output current are also

reduced, limiting the power consumed by the IC and the load.
