The global Over and Under Voltage Protection Module market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The overvoltage and undervoltage protection module is an electrical component, which is mainly used to protect circuits or equipment from overvoltage or undervoltage damage.

The global market trend for over and under voltage protection modules is influenced by several factors related to the growing demand for power quality and the increasing need for reliable and efficient electrical systems. As our reliance on electricity continues to grow, there is an increasing demand for reliable power distribution. Over and under voltage protection modules play a crucial role in ensuring that electrical equipment and systems are not damaged by voltage fluctuations, which can occur due to grid instability, lightning strikes, or other factors.Over and under voltage protection modules are widely used in industrial and commercial applications to protect sensitive equipment, such as data centers, manufacturing machinery, and medical devices. As these sectors continue to expand, the demand for voltage protection modules is also expected to rise. With the proliferation of electronic devices and their sensitivity to voltage variations, there is a growing need for voltage protection modules in residential and commercial settings. This trend is expected to continue as technology continues to advance.Infrastructure development projects, particularly in emerging economies, are driving the demand for voltage protection modules as they seek to establish reliable and stable electrical grids.
