The global Overcurrent Protection PTC Thermistors market size is predicted to grow from US$ 8626 million in 2025 to US$ 14490 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

Overcurrent protection PTC thermistor is a protection element that automatically protects and recovers from abnormal temperature and abnormal current. It replaces traditional fuses and can be widely used in overcurrent and overheat protection of motors, transformers, switching power supplies, electronic circuits, etc. Overcurrent protection PTC thermistor reduces the residual current value by limiting the consumption in the entire circuit through its resistance mutation. Traditional fuses cannot recover by themselves after the circuit is blown, while overcurrent protection PTC thermistor can recover to the pre-protection state after the fault is removed, and can realize its overcurrent and overheat protection function when the fault occurs again.

United States market for Overcurrent Protection PTC Thermistors is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
