Oxidation ditch is an extended aeration activated sludge process. An oxidation ditch is a large holding tank in a continuous ditch with oval shape similar to that of a racetrack. The ditch is built on the surface of the ground and is lined with an impermeable lining. This allows the waste water to have plenty of exposure to the open air for the diffusion of oxygen. The process utilizes a series of rotating mechanical devices, such as aerators and mixers, to promote the growth of microorganisms that break down organic pollutants in the wastewater. The wastewater circulates within the ditch, allowing for effective aeration, mixing, and nutrient removal. Oxidation Ditch Technology is known for its energy efficiency, flexibility, and ability to handle variable flow rates, making it a popular choice for municipal and industrial wastewater treatment plants seeking reliable and cost-effective biological treatment solutions.

The global Oxidation Ditch Technology market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
