Also electrolyzed water generator, which allows pretreated tap water to flow first, then enables the water enter the electrolytic cell for electrolysis. The ionic membrane separates the anode and cathode of the electrolytic cell, which can make cations enter the cathode cell from the anode cell, prevent anions from entering the anode cell from the cathode cell, thus prevent the gas generated by the cathode and anode from mixing. Besides, hypochlorous water generator can be used for sterilization.

Growing awareness of the potential health benefits associated with alkaline ionized water, including claims of antioxidant properties and improved hydration, has driven

consumer interest in oxidation potential water generators. Oxidation potential water generators are increasingly marketed as home appliances, with countertop and under-counter models available for residential use. This has expanded their consumer base beyond health-conscious individuals. Some oxidation potential water generator manufacturers have incorporated smart features, allowing users to control and monitor water quality remotely through mobile apps. This trend caters to tech-savvy consumers. Many oxidation potential water generators include water filtration systems to remove impurities and enhance the quality of the water before ionization, addressing concerns about water safety and taste.
