The global Oxidation Stability Tester market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

An oxidation stability tester, also known as an oxidation stability test apparatus or simply an oxidation tester, is a laboratory instrument designed to assess the stability of various substances, such as fuels, lubricants, oils, and other chemical compounds, when exposed to oxidative conditions. This test is crucial for determining the resistance of these substances to oxidation, which can lead to the formation of harmful byproducts, degradation, and reduced performance.

The trend toward automation continued, with the integration of robotics and automated sample handling systems. Automated testers can improve precision, reduce human error, and increase the throughput of tests.
