Ceramic-based composite materials are a type of composite materials with ceramics as the matrix and various fibers. The ceramic substrate may be a high-temperature structural ceramic such as silicon nitride or silicon carbide. These advanced ceramics have excellent properties such as high temperature resistance, high strength and stiffness, relatively low weight, and corrosion resistance. The oxide / oxide ceramic matrix composites market in the ceramic matrix composites market accounts for the main market share. This is due to the high demand for oxide / oxide ceramic matrix composites in aerospace, industrial and automotive applications. Oxide / oxide ceramic matrix composites are considered the materials of choice for the aviation, industrial and automotive industries due to their low weight and high temperature resistance. It is also widely used in industrial applications. They are cheaper than SiC / SiC ceramic matrix composites.
