Oxidized Cellulose. Oxidized cellulose was first used in 1942 and then in 1960 oxidized regenerated cellulose was created. It is formed from plant material that undergoes oxidation by nitrogen dioxide to create cellulosic acid. Oxidised Cellulose is a water-insoluble derivative of cellulose. The cellulose can be sourced from any natural source such as wood or flax, but is most commonly from cotton. It can also be sourced from pre-processed cellulose products, such as viscose or lyocell, in which case a regenerated product is made and it is known as oxidised regenerated cellulose.

Oxidised cellulose is an absorbable haemostat, is antimicrobial and acts as an adhesive barrier.
