The global Oxy-Fuel Cutting System market size is predicted to grow from US\$ 942 million in 2025 to US\$ 1455 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

It's a thermal cutting process that uses pure oxygen and fuel gas to cut through materials, such as plate steel. Heat from an oxy-fuel cutting torch is used to raise the surface or edge of the steel to approximately 1800 degrees Fahrenheit. Oxygen is then directed to the heated area using a fine, high-pressure stream.

Metal cutting equipment refers to the equipment that makes the metal material be cut into the desired shape by mechanical operation, which is an indispensable basic processing equipment in modern industrial production. With the acceleration of infrastructure construction and the progress of social development, there is an increasing demand for metal cutting equipment. According to our research, the global metal cutting equipment market reached USD 62.4 billion in 2022.
