Oxygen is a problem in the packaging of many food and pharmaceutical products because it can cause food to spoil, discolor, oxidize or develop off-flavors, thereby reducing the quality and shelf life of the product. Therefore, in order to extend the shelf life of the product and maintain its quality, flexible packaging often needs to have good oxygen barrier properties.

Oxygen Barrier Coating is a special coating for flexible packaging designed to prevent oxygen from penetrating from the packaging material into the interior of the package. This coating is typically applied to plastic films or other

on flexible materials to protect the product inside the package from oxygen.

Oxygen Barrier Coating is typically made from polymers, oxides or other barrier materials and can be applied to the interior or exterior surfaces of flexible packaging. This coating can effectively reduce the penetration of oxygen, thus protecting the products inside the package from the effects of oxygen.

The global Oxygen Barrier Coating for Flexible Packaging market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
