An Oxygen Permeability Tester is a device used to measure the rate at which oxygen gas can pass through a material. This type of tester is commonly used in the packaging industry to evaluate the barrier properties of various materials, such as plastic films, laminates, and coatings. The oxygen permeability of a material is an important factor to consider when designing packaging for food, pharmaceuticals, and other products that require protection from oxygen exposure. By measuring oxygen permeability, manufacturers can determine whether a particular material is suitable for a given application and make informed decisions about packaging design and material selection. Oxygen permeability testers typically use a variety of methods to measure the rate of oxygen transmission through a sample, including coulometric sensing, fluorescence quenching, and pressure-based methods.

United States market for Oxygen Permeability Tester is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
