The global Oxygen Sensor Recovery market size is predicted to grow from US\$ 117 million in 2025 to US\$ 144 million in 2032; it is expected to grow at a CAGR of 3.1% from 2026 to 2032.

One trend in oxygen sensor recovery is the development of more efficient and cost-effective recovery methods. This includes the use of advanced technologies, such as plasma processing and chemical treatments, to extract the precious metals from the sensors. These methods can help to increase the yield of precious metals and reduce processing times, resulting in more efficient and sustainable recovery processes.

Another trend is the growing demand for recovered precious metals, such as platinum, rhodium, and palladium, which are used in a variety of industries, including automotive, electronics, and jewelry. As the demand for these metals continues to rise, the importance of recovering them from used oxygen sensors and other sources becomes increasingly significant.
