The global Ozone Beauty Device market size is predicted to grow from US\$ 398 million in 2025 to US\$ 623 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

In 2025, global ozone beauty devices production reached approximately 48,400 units. An ozone beauty device is a beauty care device that utilizes ozone (O₃) and related oxidation technologies for skin cleansing, antibacterial care, and cosmetic skin repair treatments. It primarily works by releasing appropriate amounts of ozone or active oxygen molecules to deeply cleanse and disinfect the skin surface and pores, thereby achieving effects such as antibacterial and anti-inflammatory care, regulation of oil secretion, promotion of skin repair, and improvement of overall skin condition. Some devices also integrate functions such as steam therapy, negative ions, high-frequency electrotherapy, or cooling spray systems to enhance skincare effectiveness and improve the absorption efficiency of skincare ingredients. The device is typically equipped with an ozone generation system, concentration adjustment module, and multifunctional treatment modes, and is widely used in beauty salons, skin management centers, medical aesthetic clinics, and home beauty care applications. With increasing consumer demand for skin cleansing, problem skin treatment, and healthy beauty care, modern ozone beauty devices are gradually evolving toward greater intelligence, multifunctionality, and gentler skincare solutions. New-generation systems commonly feature more precise ozone concentration control, intelligent timing systems, and multi-mode treatment technologies to improve skincare effectiveness while minimizing skin irritation. At the same time, products integrated with blue light therapy, hot and cold mist functions, hydration infusion, and digital skin analysis technologies are becoming increasingly popular, further expanding the application of ozone beauty devices in acne treatment, oily skin management, sensitive skin repair, and comprehensive skincare treatments.

The ozone beauty device market has maintained stable growth in recent years, driven by increasing demand for skin management, problem skin treatment, and healthy beauty care solutions. As a beauty device used for skin cleansing, antibacterial care, and auxiliary skin repair, ozone beauty devices are widely applied in beauty salons, skin management centers, medical aesthetic clinics, and personal home skincare settings. They are commonly used for acne treatment, oily skin management, pore cleansing, soothing repair, and basic skincare maintenance. With consumers placing greater emphasis on safety, gentle skincare, and multifunctional treatment effectiveness, demand continues to rise for products featuring controllable ozone concentration, convenient operation, diverse treatment modes, and low skin irritation. Meanwhile, device technologies are evolving toward intelligent concentration adjustment, timing control, hot and cold mist functions, blue light therapy, hydration infusion, and portable designs, further driving the expansion of the mid-to-high-end ozone beauty device market. In the future, the market is expected to maintain stable growth, while industry competition will increasingly focus on operational safety, skincare effectiveness, ozone control accuracy, product stability, skin compatibility, and brand service capabilities.
