An ozone decomposer is a device designed to break down ozone into less harmful substances. Ozone, while beneficial in the upper atmosphere for blocking ultraviolet radiation, can be harmful to humans and materials at ground level. High concentrations of ozone can cause respiratory issues and degrade organic materials over time.

Ozone decomposers are crucial in environments where ozone is generated or used, including water treatment facilities, air purification systems, and industries utilizing ozone for sterilization purposes. They ensure that ozone levels remain within safe limits to protect human health and material integrity.

The global Ozone Decomposer market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
