The global Ozone Generator Module market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Ozone Generator Module is a device that generates ozone gas, which is a powerful oxidant and disinfectant. The module typically consists of a power supply, a high-voltage transformer, and a corona discharge cell. When the high voltage is applied to the corona discharge cell, it generates ozone gas by splitting oxygen molecules into individual atoms, which then react with other oxygen molecules to form ozone.

The upstream industry chain of Ozone Generator Module includes the production of raw materials such as oxygen and electricity. The downstream industry chain includes applications in water treatment, air purification, food processing, and medical sterilization. The demand for Ozone Generator Modules is driven by the increasing need for clean water and air, as well as the growing awareness of the health benefits of ozone therapy.

United States market for Ozone Generator Module is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Ozone Generator Module is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
