The ozone micro-nanobubble generator is a device that can generate extremely fine bubbles with a diameter of less than 50 microns. Its core technologies and features include micro-nano generation devices, ozone generating devices, oxygen generating devices, mixing devices, etc., which can efficiently generate ozonemicro-nanobubble water. These bubbles rise slowly in water, have a long residence time, and have high dissolution efficiency. They are self-oxygenating, negatively charged, and rich in strong oxidizing free radicals, making them useful in water treatment, wastewater treatment, food processing, and agriculture. It has broad application prospects in various fields such as medicine and pharmaceuticals.

The global Ozone Micro-Nanobubble Generator market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
