The global P-Chloromethylstyrene market size is predicted to grow from US\$ 116 million in 2025 to US\$ 194 million in 2031; it is expected to grow at a CAGR of 8.9% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

P-Chloromethylstyrene (p-CMS), chemically known as 4-chloromethylstyrene, is a highly reactive functional monomer containing both a vinyl group and a chloromethyl group. As a versatile organic intermediate, p-CMS plays a growing role in the development of advanced polymer materials, especially in applications such as rubber modification, ion-exchange membranes, coupling agents, and surface treatment agents. It serves as a key raw material for low dielectric resins like BVPE (1,2-bis(4-vinylphenyl)ethane) and low molecular weight PPO (polyphenylene oxide), as well as for silane coupling agents used in electronic-grade glass fiber and high-performance rubber or ion-exchange resins. With the rise of generative AI and the ongoing transition to Beyond 5G and 6G communication infrastructure, the demand for next-generation materials that support high-frequency, high-speed, large-capacity, and low-latency communication is rapidly expanding. Among them, low dielectric resins—essential for minimizing signal transmission loss—are attracting significant attention, and p-CMS is becoming increasingly important in this fast-growing market segment.

United States market for P-Chloromethylstyrene is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for P-Chloromethylstyrene is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for P-Chloromethylstyrene is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

Global key P-Chloromethylstyrene players cover AGC, Shandong Xingshun New Material, Heze Fuda Biotechnology, Shandong Tongli New Material, Starry-Med, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2024.
