P-Chloromethylstyrene (p-CMS) and its derived products are highly reactive compounds featuring both vinyl and chloromethyl functional groups, making them ideal for use in high-performance polymers, specialty resins, electronic chemicals, and surface treatment agents. Through polymerization or functional modification, p-CMS derivatives can yield advanced materials such as low dielectric constant resins, modified polyphenylene oxides, and crosslinked polymers, which are essential in applications like 5G/6G communications, aerospace, and microelectronics packaging. These derivatives also exhibit excellent performance in coupling agents, adhesives, and membrane materials, positioning them as key components in the development of next-generation functional materials.
