The global P-coumaric Acid market size is predicted to grow from US\$ 335 million in 2025 to US\$ 524 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

P-coumaric acid is a naturally occurring hydroxycinnamic acid widely used as a functional ingredient in nutraceuticals, cosmetics, food additives, and pharmaceutical intermediates due to its antioxidant, anti-inflammatory, and UV-absorbing properties. In 2025, the average global unit price of industrial-grade P-coumaric acid is approximately US\$28,500 per ton, with global annual sales volume and production both estimated at around 0.012 million tons. The industry typically maintains a gross margin range of 30%–55%, driven by extraction or synthesis route efficiency, purification cost, quality consistency, and regulatory compliance across food, cosmetic, and pharma-adjacent applications. The supply chain includes upstream plant-based raw materials or petrochemical precursors, solvents, and catalysts; midstream manufacturers focus on extraction or chemical synthesis, purification, crystallization, drying, and quality control; downstream users include dietary supplement producers, cosmetic formulators, food and beverage companies, and pharmaceutical ingredient manufacturers.

Demand for P-coumaric acid is increasingly driven by the expansion of natural antioxidants and plant-derived functional ingredients in nutraceutical and cosmetic formulations. Growth is supported by clean-label trends and rising interest in phenolic compounds with multi-functional health and skin-protection benefits. Competitive advantage lies in scalable production, impurity control, and the ability to supply consistent quality across regulated end markets.
