The global P-N Flame Retardant market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

P-N Flame Retardant, also known as Organophosphorus Flame Retardant, is a type of flame retardant used in a variety of polymers and textiles to improve fire safety. It is a white solid or liquid that is easy to dissolve in organic solvents. It can effectively prevent the ignition and spread of flames by absorbing heat and blocking oxygen supply.

The industry trend of P-N Flame Retardant is that it is gradually replacing traditional flame retardants due to its excellent performance and environmental compatibility. As a green and sustainable flame retardant, it has broad application prospects in the fields of polymer, automobile, electrical appliances, etc. However, it is still necessary to improve its cost performance and compatibility with other materials to further expand its market share.
