A packaged heat pump unit is a self-contained heating and cooling system that combines the functions of a heat pump and an air handler in a single unit. It is designed to provide both heating and cooling to a building or space, offering energy-efficient temperature control throughout the year.

The market trend for packaged heat pump units is driven by the increasing demand for energy-efficient heating and cooling solutions in residential, commercial, and industrial buildings. Packaged heat pump units offer the advantage of combining both heating and cooling functions into a single unit, providing efficient temperature control and reducing energy consumption compared to separate heating and cooling systems.
