A packaged heat pump is a type of heating, ventilation, and air conditioning (HVAC) system that combines both heating and cooling functions into a single, self-contained unit. This unit is typically located outside a building, such as a residential home or commercial facility. It's called a 'heat pump' because it can transfer heat from one place to another, providing both heating and cooling capabilities.

Energy efficiency has been a significant trend in the HVAC industry, including packaged heat pumps. Governments and consumers are increasingly focused on reducing energy consumption and greenhouse gas emissions. Manufacturers have been developing more efficient heat pump systems to meet these demands, often adhering to strict energy efficiency standards and regulations.
