The global Overload Couplings market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

Torque limiters (overload couplings) are vital components in the drive train. They help to avoid longer downtimes and expensive repairs along with the resulting costs. In case of overload resulting from a breakdown in the operation of the plant, the torque-limiting systems (torque limiters) uncouple driving and driven side while protecting the drive train from larger damages. That is why they are mostly referred to as safety couplings.
