Paclitaxel is a commonly used anti proliferative drug that reduces intimal hyperplasia and restenosis by inhibiting the proliferation of vascular smooth muscle cells. Coating paclitaxel on the surface of the balloon catheter can release it into the surrounding tissue of the blood vessel wall during balloon dilation, playing a role in preventing restenosis. Paclitaxel coated balloon catheter is used for coronary intervention treatment. It combines traditional coronary balloon catheters and drug coating techniques, aiming to prevent vascular restenosis by dilating blood vessels and releasing the anti proliferative drug paclitaxel.
